

Provenance

Payment holds where the ledger refuses an invented cause
HackCanton Season 4 - Track 1: RWA & Business Workflows

The Problem

Provenance - Pitch Deck

Slide 1: Title

Payment holds where the ledger refuses an invented cause

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

This creates dangerous ambiguity where recipients must guess and often make costly mistakes.

- Freelancer: \$850 held 9 days → split to dodge → account flagged, timeline reset
- Agency: \$2,400 held 14 days → paid from savings → double-paid when batch cleared
- Engineer: \$4,200 held 6 days → webhook returned `reason:null` → all API keys revoked
- Contractor: \$1,650 held 8 days → opened tickets → lost queue position

[illegible]

- No "reason" field to fabricate
- Release requires BOTH parties' signatures
- Auditor can verify without seeing private data
- Stranger sees NOTHING

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

Slide 4: Demo

- ✓ Fabricated cause → REJECTED
- ✓ One-signature release → REJECTED
- ✓ Stranger visibility → 0 contracts
- ✓ Auditor access → Full trail

Slide 5: Why Canton?

- True invariant enforcement (cryptographic)
- Observer privacy with auditability
- Multi-party coordination

- Daml SDK 2.10.6
- Canton sandbox (local)
- Python 3 + Flask UI
- MCP server for AI agents
